

Hybrid Training

Integrated online, virtual and practical training

Challenges

There are some good training programs for emergency services. However, these are limited by a number of courses that can be arranged and require attendance at set dates. It is not possible to train all the required emergency services personnel.

Solution

Hybrid training is a simple and flexible way to acquire knowledge on oil spill response. Interesting and practical training leads to the best results.

Advantages

Learning at your own pace thanks to the proven hybrid concept.

Comprehensive and effective, well-managed and supervised training.

Hybrid education is also cost-efficient: there are no additional costs for additional travel or attending course days.

Training for fire brigades

The fire service is generally adequately equipped to deal with smaller oil spills. However, in order to be able to carry out their duties in oil spills as effectively as possible and to keep environmental damage as low as possible, every firefighter should be able to receive appropriate basic training.

Hybrid education – what we have achieved

In Finland, the emergency services in Pirkanmaa, Lapland and Central Finland have already put our hybrid oil spill response course in good use. Feedback from fire departments and trainees alike is very positive.

The oil spill response skills of the personnel have been improved with little effort. Fire Chief Jyri Keränen says: *“The training provides good basic information and benefits the oil spill response readiness of all Lapland region. The hybrid model offers our fire-fighters a flexible and cost-effective way to acquire the necessary skills.”*
